Partnership with DISI

The second associated partner of the ROBOTS project is DISI (Dipartimento di Informatica, Scienza e Ingegneria - Department of Computer Science and Engineering).

The associated partner form with DISI was signed on 2nd of May 2018.

DISI is the single reference point for Computer Science and Engineering education, research and technology transfer at the University of Bologna.

This Department offers a wide variety of degree programs to suit educational goals.

DISI is one of the top informatics departments in Italy, offering an exciting work and learning environment to its students, teaching staff, research fellows and personnel. Its goal is to contribute to the advancement of society through education, research and technology transfer. This goal is achieved by offering a broad spectrum of expertise ranging from theoretical computer science to software, hardware and application design and development. DISI offers a wide variety of degree options to suit the educational goals: Bachelor, Masters, and PhD degrees in Computer Science, in Engineering, and in Computer Science & Engineering.

DISI strives for excellence in scientific and technological contributions to informatics. DISI researchers are well known internationally in various areas of computer science and engineering and are active in a large number of regional, national and international projects, as well as in industrial research and technology transfer through dedicated centres, academic spin-off industries and individual collaborations. The department provides one of the strongest centres for computer science and engineering research, covering such diverse areas as artificial intelligence, autonomic and complex systems, bio-informatics, middleware systems, networks, information systems and semantic web, programming languages, formal methods, hardware and software systems and their applications in medicine, energy, environment and society, to cite just a few.
